Avast SecureLine VPN vs. ExpressVPN: At a Glance

Avast offers a number of privacy and security tools—most notably its antivirus software. Its VPN is a single product for those who want nothing more than to connect to a server to protect their internet activity and mask their IP. It’s an affordable option and allows you to connect up to ten devices on one account.

ExpressVPN is a leader in the VPN world. It’s a popular choice because it’s reliable, offers fast connection and it has servers in 94 countries. All subscribers get an ad blocker as a bonus, but all the choices and features add up to a premium price—ExpressVPN is one of the most expensive options.

When comparing Avast SecureLine VPN vs. ExpressVPN, we considered more than pricing, but it’s a good place to start. Avast SecureLine VPN’s annual plan is far more affordable than ExpressVPN—you’ll save more than \$40. It’s important to also consider whether you can use the VPN service on your devices. ExpressVPN works on more platforms than Avast SecureLine VPN.

Avast SecureLine VPN allows you twice as many connected devices as ExpressVPN, but remember that ExpressVPN lets you connect your router to a VPN, so you could cover a lot of devices with a protected home network. ExpressVPN really pulls ahead with 50 more server locations than Avast—that means far more choice for where you want to connect.

[Subscribe](#)

customer support, but Avast offers phone support, which isn't common among VPN services.

Note: We didn't include a comparison of security protocols used because what's most important is that VPN services use industry-standard AES 256-bit keys, which both Avast SecureLine VPN and ExpressVPN do.

All-in-One Protection

Although neither VPN service offers malware protection as a feature or an add-on, Avast does have a separate product that combines its antivirus software with a built-in VPN known as Avast One. If you're looking to protect both online activity and what you download or click on, this might be a better choice for you. ExpressVPN offers nothing like this.

Ad Blocker

ExpressVPN includes an ad blocker that the company has labeled as a threat manager. What it does is block sites from using trackers on you, so you should stop getting those related ads that tend to pop up on your social media feeds. Essentially, this is a DNS blocker. Avast SecureLine VPN doesn't include this feature.

Bottom Line

In our comparison of Avast SecureLine VPN vs. ExpressVPN, Forbes Advisor suggests ExpressVPN for most users. Although ExpressVPN is a much pricier choice, it offers global server coverage, which can unlock more content for you. You can connect your home router to a VPN and use the included ad blocker to gain more privacy, too. Avast SecureLine VPN is good for those who want nothing more than a secure and reliable VPN at a lower price.
